Implement Client Script & UI Policy (Incident)

Milestone 3: Create onChange Client Script

Activity 1: Create Client Script

1. **Navigate to Client Scripts:**
   Go to System UI → Client Scripts.

2. **Click New** to create a new Client Script.

3. **Fill in the details:**

- **Name:** Auto set urgency for high impact – clearly shows the purpose.

- **Table:** Incident – the script runs only on Incident records.

- **Type:** onChange – executes when a field value changes.

- **Field name:** Impact – triggers the script when Impact is updated.

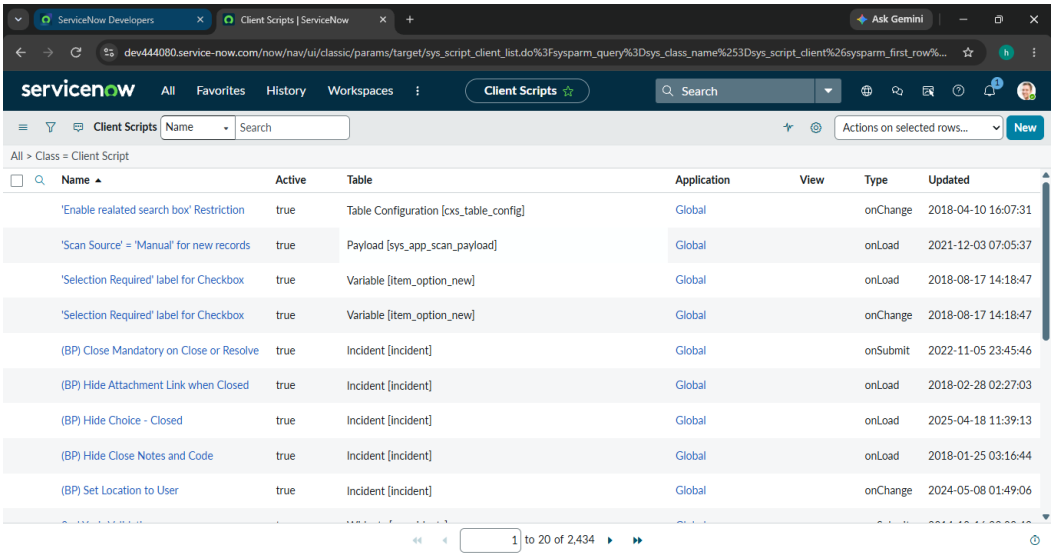

- **Active:** true – ensures the script runs immediately.

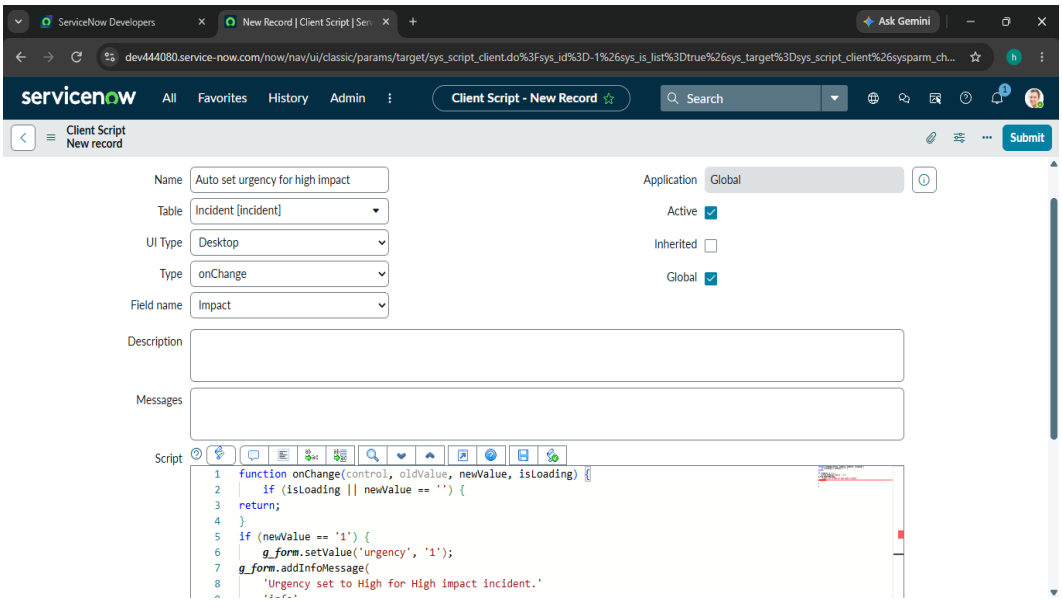

4. **Paste the script** in the script editor section.

```
function onChange(control, oldValue, newValue, isLoading) {
if (isLoading || newValue == '') {
return;
}
if (newValue == '1') {
g_form.setValue('urgency', '1');
g_form.addInfoMessage('Urgency set to High for High impact
incident.');
}
}
```

5. **Click Submit** to save the Client Script.

6. **Verify:** Open an Incident record and change the Impact field to **High**. The Urgency field should update automatically
7. Click **Submit**.
