Implement Client Script & UI Policy (Incident)

Milestone 4: Create onSubmit Client Script (Save Validation)

Activity 1: Create Client Script

1. **Navigate to Client Scripts:**
   Go to System UI → Client Scripts in your ServiceNow instance.

2. **Click New** to create a new Client Script.

3. **Fill in the details:**

- **Name:** Prevent save if Assigned To missing – clearly indicates that the script prevents saving if the field is empty.

- **Table:** Incident – applies the script only to Incident records.

- **Type:** onSubmit – executes when the user tries to save the record.

- **Active:** true – ensures the script is enforced immediately.

4. **Paste the script** into the script editor section. This script should check if the **Assigned To** field is empty and prevent the record from saving if it is.

```
function onSubmit() {
  if (g_form.getValue('impact') == '1' &&
    g_form.getValue('assigned_to') == '') {

    g_form.showErrorBox(
      'assigned_to',
      'Assigned To is mandatory for High impact incidents.'
    );
    return false;
  }
  return true;
}
```

5. **Click Submit** to save the Client Script.

6. **Verify:** Try saving an Incident without filling the **Assigned To** field. The script should prevent the save and display a warning.
7. Click **Submit**.
