Implement Client Script & UI Policy (Incident)

Milestone 6: Testing the Configuration

1. **Navigate to Incident:**
   Go to Incident → Create New to open a new Incident form.

2. **Set the Impact Field:**
   Select **High** for the **Impact** field. This will trigger the UI Policy and Client Script behaviors you configured earlier.

3. **Leave Assigned To Empty:**
   Do not fill in the **Assigned To** field. This will test the onSubmit Client Script that prevents saving if Assigned To is missing.

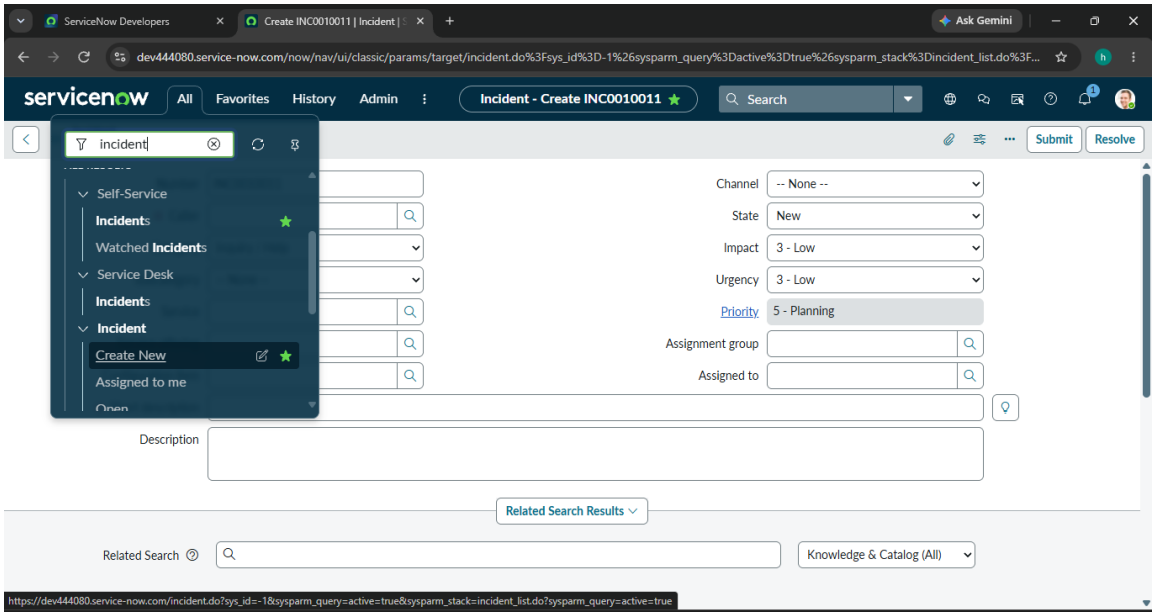

4. **Click Submit:**
   Attempt to save the Incident record.

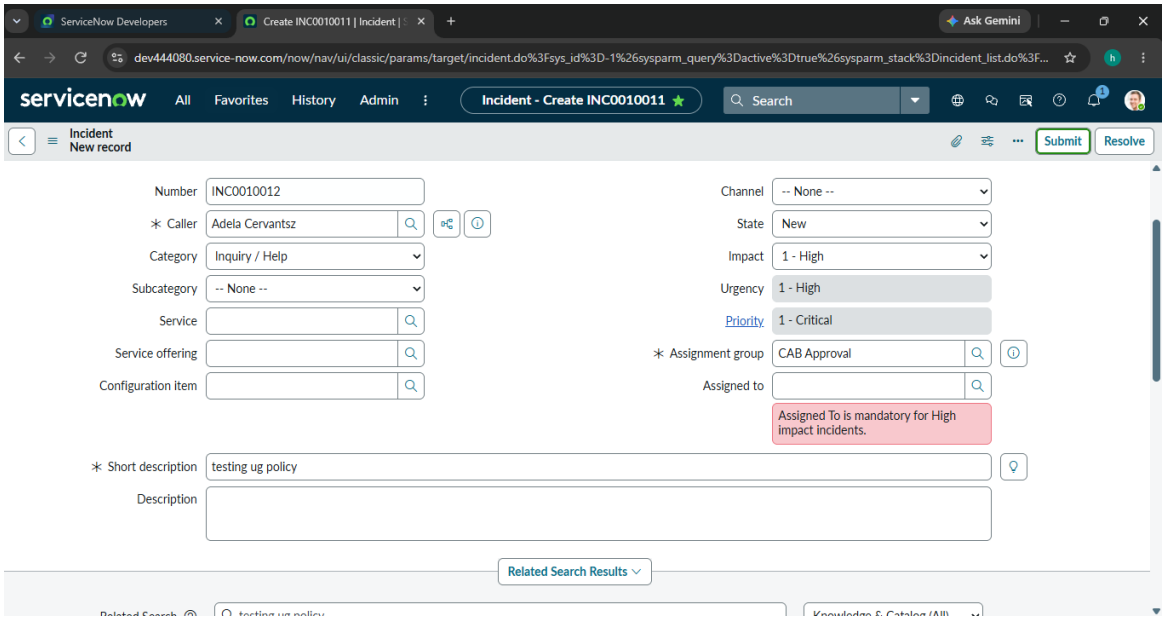

5. **Verify the Result:**

- The Incident should **not be saved** because Assigned To is required when Impact is High.

- An **error message** should appear, indicating that the Assigned To field cannot be empty.

- Confirm that all UI Policy actions, such as read-only fields or automated urgency updates, are working as expected.

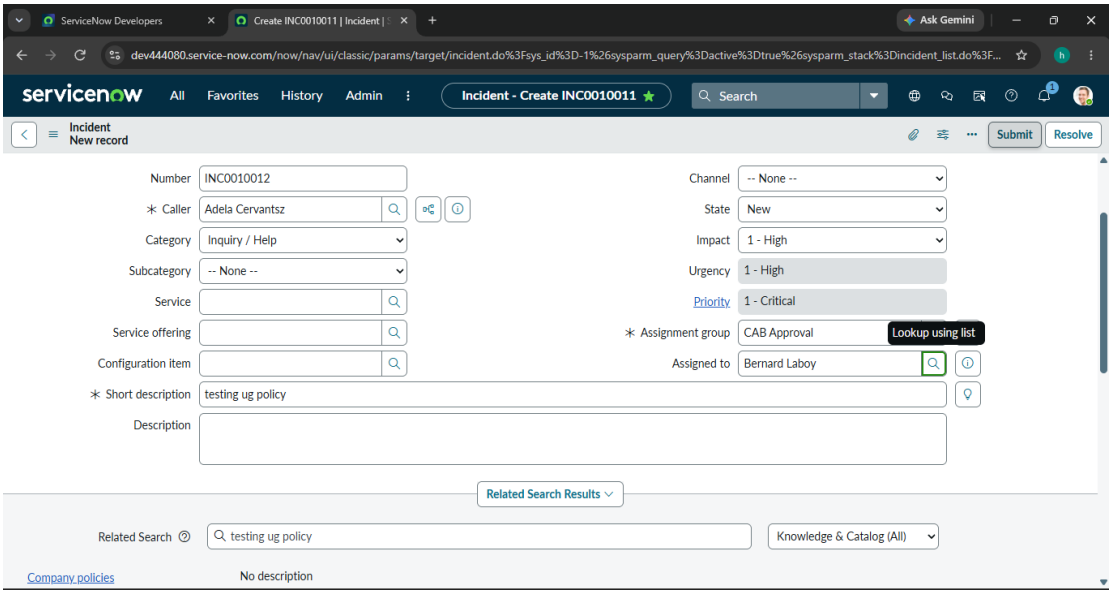

Activity 2: Test Successful Save

1. **Fill the Assigned To Field:**
   Open the Incident form and select a user in the **Assigned To** field. This ensures the onSubmit Client Script condition is satisfied.

2. **Click Submit:**
   Attempt to save the Incident record.

3. **Verify the Result:**

- The Incident should be **saved successfully** without any errors.
- Confirm that all other configured behaviors, such as:
- **Urgency auto-setting** (from the onChange Client Script)
- **Read-only fields** (from the UI Policy Action)
- **State restrictions** (from the onCellEdit Client Script)
  are functioning as expected

Activity 3: Reverse Condition Test

1. **Open an Existing Incident:**
   Go to Incident → Open and select an Incident where **Impact** is currently set to **High**.

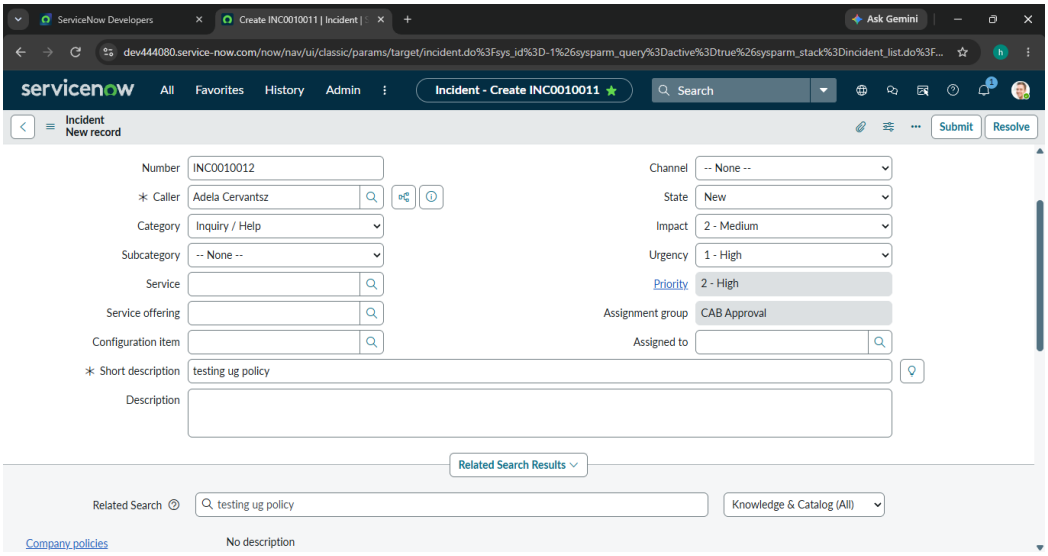

2. **Change Impact:**
   Update the **Impact** field from **High** to **Medium**. This will test the **Reverse if false** functionality of your UI Policy and the behavior of your Client Scripts.

3. **Verify the Field Behavior:**

   - **Assigned To** should no longer be mandatory.

- **Urgency** should now be editable, meaning the read-only UI Policy action is reversed.

- **Save the Record:**
  Click **Submit** to save the changes. The record should save successfully without errors, confirming that the reverse condition works as intended.

Activity 4: Test List Edit Blocking

1. **Navigate to the Incident List:**
   Go to Incident → All to view all Incident records in a list view.

2. **Attempt a List Edit:**

   - Locate any Incident in the list.

   - **Double-click the State field** to try editing it directly from the list.

3. **Verify the Behavior:**

   - An **alert message** should appear, indicating that direct changes to the State field are not allowed.

   - The **State value should remain unchanged**, confirming that the onCellEdit Client Script is working correctly.

Activity 5: Test Form-Based Update

1. **Open the Incident Record:**
   Navigate to the same Incident record you used in previous tests.

2. **Change the State:**
   On the **Incident form**, update the **State** field to a new value. This tests that changes via the form (not the list) are allowed.

3. **Click Update:**
   Save the record by clicking **Update**.

4. **Verify the Result:**

- The **State change should be saved successfully**.

- Confirm that other fields, such as **Assigned To** and **Urgency**, still follow the configured UI Policy and Client Script rules.
